

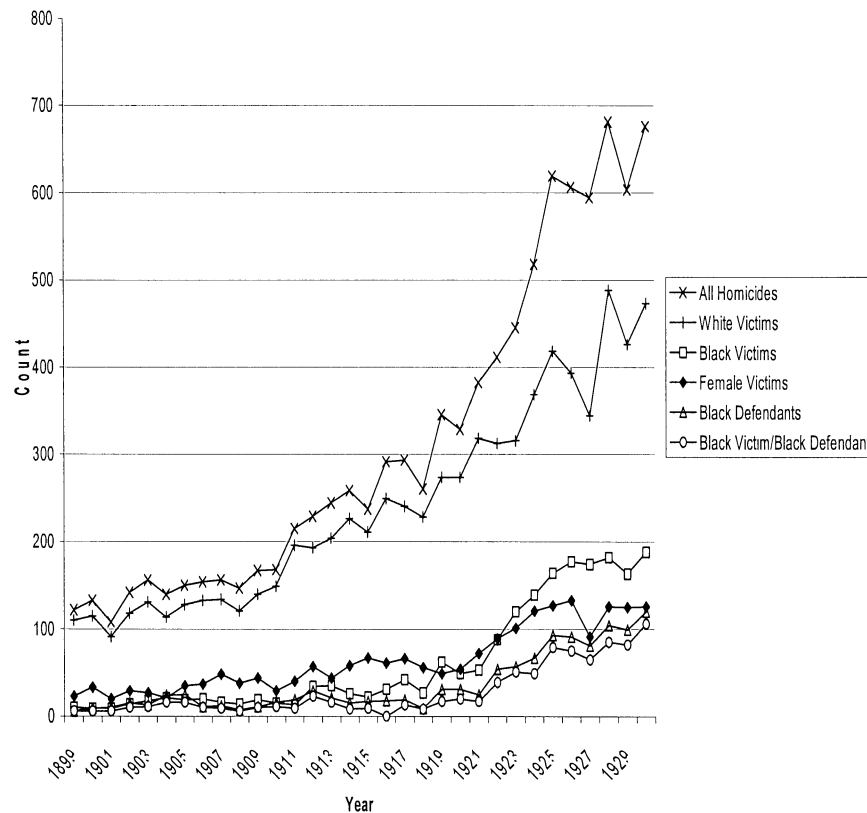

Figure 3
Race and Gender of Victim, Race of Defendant, and All
*Homicides 1889-1930(N=9,978)*³²³

An increase in automobile related deaths does account for some of the increase in homicides in the 1920's. These cases represent a non-trivial proportion of all homicides in the 1920's.

Figure 4 shows the numbers of homicides with all accident and all police cases removed. The automobile cases represent a non-trivial proportion of all homicides in the 1920's, and removing automobile cases and all police cases does flatten the increase.³²⁴

³²³ The corresponding frequencies for Figure 3 are included in Table 3. The frequencies for these variables for the period 1874-1900 are included in Table 4, app.B. *See also supra* Tbls.A, B.
